# EOS ELEMENTS

Wall mount dimensions  
8 1/2" W x 8 1/2" H

Ceiling mount dimensions  
9 3/8" H

Adapts to the crossed-arm kit

The EOS support system with a square bar is intended to alleviate the problems posed by large installations.

Front view of the arm support bracket.

Since the EOS system is designed to cover such large areas, all the pieces composing the set have been made as small as possible to enhance the appearance of the installation.

A single set of EOS arms gives you 18 feet of width with a 12 foot projection. For longer extensions, the system is designed to incorporate as many sets of arms as needed until the desired width is achieved.

The EOS system is designed and manufactured by Corradi USA. It enables easy fitting of the awning mechanism, thus the entire awning system can be installed quickly and easily on a 40mm x 40mm square bar and it benefits from the arm adjustment system. The design of the EOS follows the same refined lines and special emphasis on concealing visible screws. Like all Corradi models, the EOS design can match well with any outdoor decor.

A-NIKS is an Exclusive Dealer of:
